

## My Tokens Are Missing! – Quick-Fix Card

### How to Add ANY Custom Token to MetaMask (in 30 Seconds)

**Don't panic.** Your tokens are on the blockchain. MetaMask just can't see them yet. Follow these steps:

#### 1. Copy the Correct Contract Address

For **Buttchain (BUTT)** on Polygon, use:

```
0xc009b6c310fC0C9c93E0CAF0318759037cCD8FC2
```

Always verify the address from the official project website or Polygonscan.

#### 2. Add to MetaMask (Desktop)

- Open MetaMask → make sure you're on the **Polygon Mainnet** network.
- Scroll down → click **"Import Tokens"**.
- Select **"Custom Token"** tab.
- Paste the contract address. The symbol (e.g., BUTT) and decimals (18) will auto-fill.
- Click **"Add Custom Token"** → confirm.

Your balance appears instantly.

#### 3. Add to MetaMask (Mobile)

- Tap the **"Tokens"** tab → scroll down → **"Import Tokens"**.
- Tap **"Custom Token"** → paste the contract address.
- Tap **"Import"**.

Done.

#### 4. Still Not Showing? Troubleshooting

Problem	Solution
Wrong network	Switch to Polygon Mainnet.
Address typo	Double-check the contract address.
MetaMask glitch	Remove the token and add it again.
No dollar value	That's normal for newer tokens. Use DexScreener for price.

### 5. Ultimate Verification (Polygonscan)

1. Go to [Polygonscan.com](https://polygonscan.com).
2. Paste **your wallet address** in the search bar.
3. Look under **“Token Holdings”** – your tokens will be listed there.

If Polygonscan shows them, they're **100% safe**. The issue is only with your wallet's display.

**Keep this card handy.** Share it with anyone who thinks they've lost their crypto.

Not financial advice. Always verify contract addresses independently.
