

Bitcoin Halving 2028 – Price scenario comparison

| Scenario | Projected 2028 Halving Price | Projected 2029 Peak | Implied Gain | Key Drivers |

|-----|-----|-----|-----|-----|

| Bear | \$75,000 – \$100,000 | \$100,000 – \$150,000 | 20-50% | ETF inflows stall, regulatory delays, macro tightening |

| Base | \$100,000 – \$150,000 | \$150,000 – \$250,000 | 50-100% | ETF inflows continue, CLARITY Act passes, modest institutional adoption |

| Bull | \$150,000 – \$200,000 | \$250,000 – \$500,000 | 100-200% | Accelerated ETF adoption, AI miner pivot reduces sell pressure, favorable macro |

Based on diminishing returns analysis and current institutional flow data.
